- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Desde el punto de vista morfogenético, destacan las formas de origen fluvio-coluvial, generadas por procesos de erosión-acumulación causados por la red hidrográfica, dando lugar a morfologías muy características en las que predominan las llanuras y planos inclinados. Las fisiografías de vegas y llanuras de inundación, vinculadas a los cursos de los ríos y arroyos, son las más representativas. También es importante el sistema morfogenético denudativo (colinas y cerros sobre trías con yesos).

4.2 Quality and importance

Se realiza el cambio y actualización de *Aphanius iberus* a *Aphanius baeticus* (salinete) en los formularios Normalizados de Datos Natura 2000. El *Aphanius iberus* (faretet), en el momento de la aprobación de la Directiva 92/43/CEE del Consejo de la Unión Europea relativa a la Conservación de los hábitats naturales y de la flora y fauna silvestres, era considerada el único taxón del género *Aphanius* presente en Andalucía. Recientes estudios morfológicos y filogenéticos han demostrado diferencias significativas entre las poblaciones orientales y occidentales, dando como resultado la descripción de una nueva especie del género; *Aphanius baeticus* (salinete), catalogada en peligro de extinción en el Catálogo Nacional de Especies Amenazadas y en el Catálogo Andaluz de Especies Amenazadas.
